Foot Surgery

PODIATRIC SURGERY

Dr Nick Marino Podiatric Surgeon & surgical correction of bony malalignment

Podiatric-Foot surgery is performed by practitioners - **Specialist Podiatric Surgeons** that have undergone further post graduate education and training with registration as specialists in Podiatric Surgery. The scope of surgery ranges from the simple ingrown toenail procedure through to the correction of hammertoes, bunions and complex foot reconstruction procedures.

Procedures are performed in various private hospitals and day surgery centres in either day- case or in-patient settings. Less invasive procedures can be performed in the Podiatric Surgeons' rooms.

Surgical procedures can be performed under local anaesthesia, with the Podiatric Surgeon giving pre-operative sedation if required. More extensive procedures may be better suited to general anaesthesia, spinal block or IV sedation in which a specialist anaesthetist is engaged.

The Podiatric Surgeon may issue you with appropriate drugs following your surgery and these may include anti-inflammatory medication, analgesics (pain killers), antibiotics etc.

Dr Nick Marino is the Podiatric Surgeon based at this practice.

You are welcomed to see his profile on this web page.

Do not hesitate to call with any query.
